

Sandbagging Basics

SAMPLE TEXT - NOT APPROVED ADVICE. This two-sided layout demonstration requires technical and local review.

Do not enter moving water or work where a slope, wall, roadway, or escape route may become unsafe. Reviewer must replace or confirm this wording.

Prepare

Use gloves and suitable footwear

Choose stable ground away from traffic

Keep a clear route away from the work area

Sample placement sequence

Clear loose debris only if it is safe to do so.

Place each bag flat and close gaps between bags.

Stagger joints in later rows rather than lining up seams.

Sandbagging Basics - continued

SAMPLE TEXT - NOT APPROVED ADVICE. Back page demonstrates checks, limits, local facts, and citations.

Check the work

Ground remains stable

Bags remain flat

Seams are staggered

Exit route remains open

Reassess conditions

Observe from a safe position.

Stop if water rises or the installation shifts.

Leave before the escape route is threatened.

This handout is not a substitute for directions from emergency personnel. Exact stop-work criteria require subject-matter review.
